

## ABSTRACT

A poly back pack is disclosed comprising a plurality of folded poly bags wrapped in a thin film cover, the cover having an opening for allowing the folded poly bags to be sequentially pulled out therethrough, the folded poly bags being joined to each other and having perforated lines between poly bags for allowing said poly bags to be easily separated from each other, the poly bags partially unfolding along the length thereof as they are being pulled out of the cover. Further disclosed is a poly bag pack which comprises a plurality of folded poly bags wrapped in a thin film cover, the cover having an opening for allowing the folded poly bags to be sequentially pulled out therethrough, the folded bags being stacked on top of each other, each folded bag having a portion thereof tucked into an adjacent folded bag, so that when one bag is pulled out of the pack, the adjacent bag to the bag being pulled is also partially pulled out of the pack. Further disclosed is a poly bag pack storage dispensing device for storing the pack of poly bags in one compartment thereof and for sequentially dispensing the poly bags through another compartment thereof. In one embodiment, the storage dispensing device is integrally formed with a dog leash storage-dispensing apparatus. Further disclosed is a pooper scooper for picking up dog excrement.
